

Lacanche - Optional “Island Back-spacer” Installation:

The 2 ¾” (70mm) deep “Island Back-spacer” simply clamps to vertical flange of Stainless Tabletop. Test fit first with supplied “C-clamps”, and then remove Back-spacer if any alignment is necessary. The Tabletop flange can be bent out slightly for alignment of Back-spacer. Generally it is required to bend flange only at clamp area. A “crescent wrench” adjusted to flange thickness works well. {This spacer meets UL clearance and stove ventilation requirements at rear Only If a heat-resistant backsplash is installed on wall above cooking surface.}

Tabletop

The Island Back-spacer is available in these lengths>
