# Lacanche Gas Oven Ignition Procedure & Use

GAS OVEN VALVE  
HANDLE & DIAL

-Turn on main gas supply to range.

-Depress oven valve handle & rotate anti-clockwise to the "IGN" position.

-Depress handle *fully*. Igniters will continue to spark (click) until pilot flame has lit. Keep holding for 10-20 seconds **after "Clicking" has stopped** to wait for the pilot's thermocouple to heat up. Only a hot thermocouple will keep the gas valve open.

-Release handle. At this point, the igniters should not longer be sparking. Depress and rotate burner valve handle to desired temperature position.

-To turn off, rotate burner valve handle to "IGN" position. Depress handle halfway to move into the "Off" position.

*-If using the gas oven for the first time after installation, you will need to purge the fuel lines of air before the burners/oven will ignite. This will take up to 2 minutes. The handle must be depressed for this period of time.*
